

MOBILE COMMAND SMART PHONE APP

OVERVIEW

DSX Mobile Command offers features of the DSX Workstation paired with the convenience of an iOS™ or Android™ compatible Smart Phone or tablet. Using Wi-Fi or mobile cell service, daily operation is enhanced with mobile features including the activation of custom predefined commands, locking/unlocking of doors, control of alarm points and the monitoring of system events from a mobile but secure application. DSX Mobile Command is a standard feature of both the Access and SQL versions of software. Light and Dark Modes of operation are based on phone settings.

COMMANDS

Custom user defined Command buttons can be configured to execute most functions of the DSX Access Control System. Global functions such as Building, Campus and District Lockdown, Incident Response Reconfiguration, and even repetitive chores such as momentarily unlocking a door or granting access to a gate can be programmed into Command buttons for easy activation by authorized users.

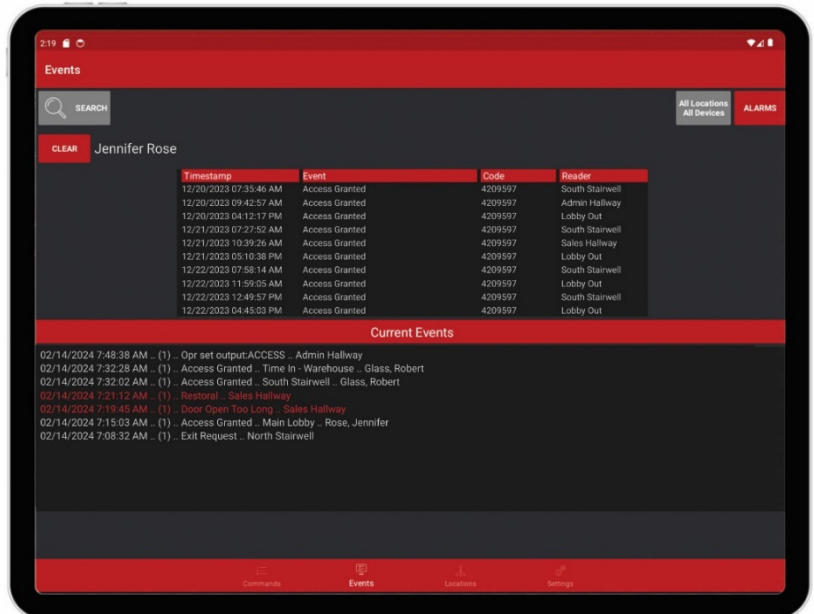

Each Mobile Operator is defined in WinDSX and assigned the appropriate commands and privileges according to their password profile. Options range from a single Command to up to 20 Commands per user.

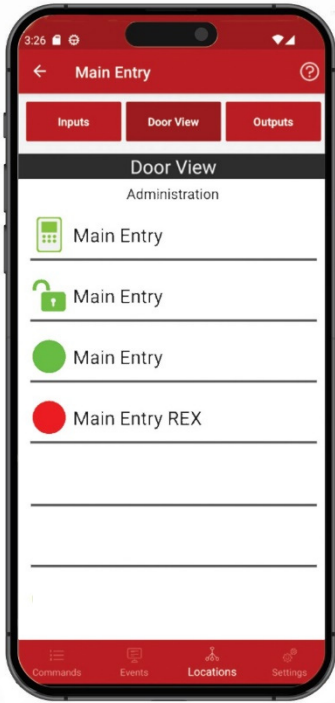

REAL TIME EVENTS

DSX Mobile Command Event screen displays current system activity monitoring with a dynamic Event Filter. This filter allows the Operator to view all system activity or Events only from a selected Door. If the Alarm screen is selected, only Alarms are displayed.

Access Granted, Access Denied and Alarms as well as system changes are observed by the Operator for the Locations allowed by their password.

The Search feature allows for Event History to be searched by Name, Card Number and by Door. Card Holders can also be De-Activated (disabled) or Activated (enabled) from the Search feature.

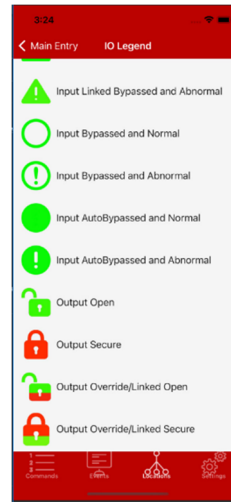

DOOR VIEW

Real time annunciation and control is displayed for reader-controlled doors. Mobile Command Operators can view all states of the Door in one convenient view.

For the service technician, Mobile Command can facilitate the commissioning and testing of a new system. The status and control of individual Inputs and Outputs is available wherever the technician might be. When a Door is selected, a Door View is shown that provides the live status and control of the Reader, Lock Output, Door Position and REX Inputs.

IO Legend screens are available for reference.

REQUIREMENTS

DSX Software

Access - DSX Version 5 and higher
SQL - DSX Version 6 and higher

Mobile Devices

Android™ Version 6 or higher
Apple iOS™ Version 10.3 or higher

Security

DSX Mobile Command uses AES256 encryption for security.
