Image Recall and Card Control

Image Recall / Card Enable - Disable

Image Recall displays a Card Holders primary Image automatically when their card is used at a predefined reader or manually when the Card Event is clicked on in the Event Monitoring Window of the Workstation program. Devices can be assigned up two time zones to determine when Image Recall is active for that reader.

This applies to all Access Granted or Access Denied messages. Manual Image Recall will work even if there are no devices programmed for Auto-Image Recall. Once the Card Holder is clicked upon, their image will display until the next automatic or manual recall of an Image or until the Image is closed and/or until the features is disabled under the Customize Menu.

- Right Clicking on the Image will close it.
- Double Left Clicking on the Image will invoke the Search Engine - see next image
- Double Left Clicking on the text below the Image will start the Card Enable/Disable feature. - see bottom image.

Card Enable/Disable from Image Recall Window

There is a new feature that will allow a card to be enabled or disabled from the Image Recall Window in Workstation. When the picture is displayed in response to a card read, the operator can double click on the text at the bottom and enable/disable buttons will appear. The operator can click on a button to enable or disable the card that was just read. We are using the Database API to send text files that change the stop date of the card. The database program must be running on the PC that performs daily ops. This is typically the Comm Server PC.

Disable will set the stop date to the present time.
Enable will set the stop date to the next day.

The Enable stop date setting can be overridden using a text file that defines how many days to enable the card for. This feature must be enabled in DB_settings.txt. The feature is set to "0" or off by default. Enable by placing the number of days desired in the text file. You may also set the offset to a period of time.

```
DB_settings.txt - Notepad
File Edit Format View Help
-----
Name: CeOffset
Value: 3
Default: 0
Desc: DispMug Card Enable date offset. 0=Feature Disabled, 1=Card will be enabled for 1 day.
Set to 9999 to enable card forever.
-----
Name: CeStopTime
Value: 00:00:00
Default: 00:00:00
Desc: DispMug Card Enable Stop Time. Adds a specific time to the stop date. 13:15:00 would
equal 1:15 PM. Set for minutes of 00, 15, 30.
